FOR IMMEDIATE RELEASE

Kjaerhus Audio releases Spectra v1.1

Kjaerhus Audio has announced the release of Spectra v1.1. The update is free for all registered users.

The update includes 318 new presets from sound designers: DJ Bach, Claude Climer and Emdot, a German Users Manual and some bug fixes.

Availability

The new version is available July 18, 2006 as download from the Kjaerhus Audio web site. Until August 1, 2006 the price is discounted to USD \$148.00 as a part of the summer sale. After August 1, 2006 the price is USD \$198.00.

About Spectra

Spectra is a synthesizer plug-in which combines multistage additive synthesis with subtractive synthesis in an easy to operate and intuitive product. It provides you with a wealth of timbral possibilities, ranging from classic synthesizer sounds to re-synthesized instrument sounds and sound morphing. It features a 250 partial additive engine with up to 8 detune-able oscillators per Voice. Up to 100 harmonies can be made on a timeline for re-synthesis and harmony morphing. An audio analyzer is available to convert wave files into harmonies. The subtractive part includes 12 analog modeled filters with resonance, two of those to self-oscillation. Two LFO's are available for tremolo, vibrato and filter modulations. Five flexible multipoint envelopes with looping and time-stretch capabilities are available to control amplitude, filter cut-off, pitch and modulation level for each of the two LFO's. The effect section features Chorus / Flanger, Delay, Phaser and Reverb. A two bank preset system is available for easy program handling; you can, for instance, browse through one bank and easily save your favorite sounds to the other bank. There is no latency, which makes this the ideal instrument for real time performance in the studio or on stage.
